

## CCI-TR ROLLS

---

This table of 'rolls' describes the rolling process of the Continuous Commodity Index-Total Return (CCI-TR). The rolls occur on the second Friday each January, February, April, June, August, and November. The Index is notionally composed of commodity futures contracts on physical commodities. Unlike equities, which typically entitle the holder to a continuing stake in a corporation, commodity futures contracts normally specify a certain date for the delivery of the underlying physical commodity. In order to avoid the delivery process and maintain a long futures position, contracts nearing a delivery date must be sold and contracts that have not yet reached delivery must be purchased. This process is known as "rolling" a futures position. An index, such as the CCI-TR, is commonly known as a "rolling index" because it replaces futures contracts as they approach maturity by notionally selling and purchasing offsetting contracts to avoid delivery and maintain exposure in liquid contracts.
